

“Results matter.”

VITROS® ECIQ

Immunodiagnostic
System

Designed to help you
ensure the result integrity
& quality you need to
confidently deliver the
results that matter.

A Versatile System that Provides Peace of Mind

Advanced Security

- + The VITROS® ECiQ Immunodiagnostic System has proprietary Intellicheck® technology designed to significantly reduce analytical errors.
- + The IntelliReport provides real-time status on the quality of every patient result, for worry-free result reporting.

Optimized Efficiency

- + Minimal maintenance, including no tubing cleaning or replacement, and no priming of reagents, even for start-up operations, means less operator intervention and true walk-away automation.
- + e-Connectivity® with Predictive Technology operations provide highly secure access to system data for immediate diagnostic and performance analysis, to maximize system uptime and increase staff productivity.

Cost Effectiveness

- + Patented VITROS® Technologies are designed to deliver predictable financials and eliminate many of the hidden costs that can be associated with other immunoassay analyzers.
- + Standardized reagents use the same reagent packs across all VITROS® Systems

Key Features

- + Enhanced Chemiluminescence technology for excellent sensitivity and broad dynamic ranges
- + MicroWell technology allows for small sample volumes with minimal waste
- + Intellicheck® technology for continuous process verification help ensure correct results the first time
- + Short sample, clot, and bubble detection offers greater security
- + Single use disposable tips eliminate carryover and cross contamination
- + No plumbing, drains, vents or deionized water eliminates many costs associated with alternative systems
- + Small footprint requires less space and overhead expenses
- + Up to 20 Integrated Reagent Packs loaded any time and stored on-board for continuous, random access operation
- + Low total costs with increased reportable result efficiency, fewer errors and interventions, and more effective staff utilization
- + Easy to train and cross-train operators
- + Up to 90 results per hour*

* Depending on test mix
